Package Description.....	1
SVN Checkout.....	1

## Package Description

This package contains the the actual running scripts and its configurations files for the "BuzatuTree", etc. We want the other packages to be as they are, but the configurations can be different between different users.

## SVN Checkout

The first port of call will be to check out the package which is stored:

Setup these environment variables by running this code or adding it to your ".profile" on a Mac, your ".bashrc" on Unix pplx machines at Glasgow or ".zshrc" on lxplus machines at CERN, then starting a new window.

```
export SVNUSR="svn+ssh://svn.cern.ch/repos/atlas-abuzatu"  
export SVN_EDITOR="emacs -nw"
```

To take a look inside the package's trunk from the browser

<https://svnweb.cern.ch/trac/atlas-abuzatu/browser/BuzatuWH/trunk>

or from the terminal

```
svn ls ${SVNUSR}/BuzatuWH/trunk
```

To checkout the package we should create an area locally:

```
mkdir BuzatuWH  
cd BuzatuWH
```

Check out the trunk:

```
svn co ${SVNUSR}/BuzatuWH/trunk
```

or to give it a new name, such when retrieving the package as part of an analysis working frame of several packages

```
svn co ${SVNUSR}/BuzatuWH/trunk BuzatuWH
```

Or, checkout a tag:

```
svn co ${SVNUSR}/BuzatuWH/tags/BuzatuWH-00-00-01
```

Back to mother package: AdrianBuzatuWHAll.
