Example with bulletabove specifying the width of the input window with <code>inputsize="20"</code> and adding a button for approving:.....	1

# This is my sandbox

Right now, this is just to **test forms, tables and to set up comments**. This will help eventually for adding *new abstracts and comments* .

## What we really need as an output is something like this:

- Current abstracts:
  - ◆ author, for the conference/workshop [☞](#): this is an example for linking the conference website...
  - ◇ deadline: dd/mm/2009
  - ◇ status: approved / pending / **rejected** (better would be a status box!)
  - ◇ abstract: vx (as an attached document for versionning, if possible a .pdf)
    - comments by XX.XX: inline or as an attached document (if possible a simple text file).

**Below, you can find plenty of example...**

**Example with `bulletabove` specifying the width of the input window with `inputsize="20"` and adding a button for approving:**

- ◆ bullet above comment 1

just a test	for a table
-------------	-------------
