# Some News

Please add your news items in this page, most recent first. The NewsPlugin - generated headlines can be found in NewsPluginExampleHeadlines

Announces should be in the form of bulleted lists (3 spaces, a star, a space). The first line of the first 5 news will be shown in the front page, so try to put a meaningful short summary as the first line.

---

- **1.24** *18 Feb 2003* fixes
  - ◆ hidden webs now do not appear in sitemap anymore
  - ◆ if NOSEARCHALL is set in a WebPreferences of a web, do not include it in group searches
  - ◆ some html bug fixes in ks\_leftbar template
  - ◆ typo fixed in the doc: TOPIC instead of TOPICS found by Nathan Neulinger
  - ◆ default CSS: class "compact" can be used in ul and table tags to set left margin of bulleted list to none
- **1.23** *21 Dec 2002* accesskeys in tooltips.
  - ◆ **WARNING** does not work on cygwin. please use 1.22 on cygwin (it triggers a bug in cygwin: "cannot fork"...)
  - ◆ doc: all accesskeys documented in tooltips ([Alt-E]...)
- **1.22** *21 Dec 2002* bugfixes
  - ◆ bugfix: Wiki Words in web description messed up tabs
  - ◆ bugfix: some wrong title colors in search results pages
  - ◆ hidden webs are indented a bit more in sitemaps
- **1.21** *17 Dec 2002*
  - ◆ **[!]** You should apply the Patch [TWiki:Codev/ViewUseCssInKoala](#)
  - ◆ tooltips to all the tabs and links in view mode
  - ◆ bugfix: background color for sitemap was omitted.
  - ◆ docfix: TOPICSTOP was not documented
  - ◆ script now checks that the needed variables are defined in TWikiPreferences, and issue warnings on missing ones
  - ◆ default css for html tags <b> and <i>, and twiki \_\_ constructs are rendered in a colored ink. Note that this is not the case for the twiki \* and \_ constructs as they are mapped to strong and em tags
  - ◆ Access keys supported, on mnemotechnic letters. Disable via the KSNOACCESS variable
  - ◆ favicon.ico supported
- **1.20** *11 Dec 2002*
  - ◆ **[!]** Apply the patches NoWebHome.patch and NoWebHome2.patch from: [TWiki:Codev/SettingParentTopicToNone](#) (it is only cosmetics, will not break if not applied)
  - ◆ **[!]** define the variable **%CSS%** in the TWikiPreferences to nothing.
  - ◆ **[!]** define the variable **%TOPICSTOP%** in the TWikiPreferences to nothing.
  - ◆ New **%CSS%** TWiki var to override CSS per web
  - ◆ New global Koala Skin KSCSS var to define an additional external style sheet local to the site
  - ◆ New layout:
    - ◇ left margin is smaller
    - ◇ left margin do not depend anymore on web/topic names (long names could ruin the layout before)
    - ◇ "breadcrumbs trail" to give the hierarchy at the top instead of the left margin
  - ◆ New global variable KSNOMARGIN, and per-web option NOMARGIN to specify a different layout with no left margin for webs having wide contents.
  - ◆ New option KSFILERMS (= ALL for all users, or unix group name) at Martin request.
  - ◆ New options to set position of TWikiForms per web: FORM\_LM, FORM\_TL, FORM\_TR, FORM\_BL, FORM\_BR, and global variable KSFORM\_POS for the default.
  - ◆ checkbox labels are clickable, see [TWiki:Codev/FormsUseLabelTags](#)

- ◆ New link to directly create a new topic, via new template oopscreate
- ◆ Cleaner layout (skin) for printing.
- ◆ textarea { width: "90%";height: "60%";} removed from style (bug in IE 5)
- ◆ fix: quoting of "%TOPICPARENT%" in savemulti by Esteban Manchado
- ◆ -r option to script to uninstall
- ◆ reorganisation of the code, it should be easier to add features now.
- **1.19** *18 Sep 2002*
  - ◆ Support for Navbar Plugin: See KSNONAVBAR variable To enable Navbar support, install the plugin, and re-generate
  - ◆ some macros in templates/ks\_boxes.koala.txt to do text boxes in the color scheme of the web
  - ◆ bugfix: lock remained when previewing before save with mod\_perl
  - ◆ new feature: option HIDDEN possible on sub-webs to save navigation bar space. (contributed by Fabio Spreafico and Wenzel Kalus, Biomax)
- **1.18** *23 Aug 2002*
  - ◆ bugfix: navigation bar was badly generated in some cases
- **1.17** *21 Aug 2002*
  - ◆ **[!]** add the line to your Site Prefs (TWikiPreferences), to be forward-compatible with the upcoming TWiki release.  
*6 spaces \* Set EDITBOXSTYLE = width: 99%*
  - ◆ bugfix: names like WebHome have been replaced by their "meta" name, (e.g.: %HOMETOPIC%)
  - ◆ bugfix: sitemaps were broken in 1.16 (bad html comment syntax: -- is forbidden in comments, but browsers didnt mind before...)
  - ◆ bugfix: search result pages header colors were broken since 1.14
- **1.16** *09 Aug 2002*
  - ◆ bugfix: CSS was misplaced on some views (search, diff...) (bug introduced in 1.14 found by Jon Reid)
  - ◆ bugfix: some garbage could be seen in some views in the parents field on some pages.
  - ◆ bugfix: cleaning pass on html to pass W3C validator <http://validator.w3.org/> . Tested: view, diffs, changes. Work remains to do for other scripts (edit), but may imply more fixes to TWiki itself.
  - ◆ for validation, you may want to apply also this patch:  
<http://twiki.org/cgi-bin/view/Codev/InvalidHtmlFixRdiff>
- **1.15** *08 Aug 2002*
  - ◆ new option variable KSNOEXPAND for space-tight people, to use the same template/ space as 1.14 and before. (no need to upgrade if you do not need this option)
- **1.14** *07 Aug 2002*
  - ◆ **[!]** bugfix: when saving with the bottom save button from the preview view, parent field was overwritten by garbage with %TOPICPARENT%. You must repair the damage done to some pages, see: <http://twiki.org/cgi-bin/view/Plugins/KoalaSkinDev#topicparent> You can either:
    - ◇ edit by hand the pages showing %TOPICPARENT% strings, if some exist on your site.
    - ◇ use the automatic shell script:  
<http://twiki.org/p/pub/Plugins/KoalaSkinDev/repair-topicparent>
  - ◆ mail template redesigned.
  - ◆ Hints for writing KSICON
  - ◆ Tests /tmp/hsv2rgbhex & /tmp/rgb2hsvhex before using them
  - ◆ new %KSHELP% variable
  - ◆ %TMPL:INCLUDES are now expanded at generation time. Much slower at generation, but cuts disks access at runtime.
- **1.13** *18 Jun 2002*
  - ◆ **[!]** you may want to apply the patch to Dec 2001 version:  
[TWiki:Codev/SkinParamOnAllTemplateReads](http://twiki.org/Codev/SkinParamOnAllTemplateReads) (but nothing serious will happen if you dont)
  - ◆ A way to re-generate templates from the web added

- ◆ bugfix: the WebList template outputted with -i was buggy (the \* EMPTY line was mistaken for a web declaration)
- ◆ bugfix: when previewing a page containing html forms (such as the registration page), save buttons were inoperant Bug found by Samuel Tardieu.
- ◆ bugfix: Internet Explorer rendered badly the sitemaps, workaround for this IE bug.
- ◆ doc: which patches to apply are more explicit
- ◆ announcements of the koalaskin@koalaNOSPAMPLEASE.ilog.fr and koalaskin-announce@koalaNOSPAMPLEASE.ilog.fr mailing lists
- **1.12** *05 Jun 2002*
  - ◆ **[!]** Tenser signature patch used, but you **must** apply the TWiki:Codev/TenserSignature patch to bin/edit
  - ◆ empty groups by declaration. Suggestion of Matt Wilkie. Put the word EMPTY at the start of the Web description.
  - ◆ cosmetic: attachements table left-aligned in view mode
  - ◆ %USERSWEB% everywhere, instead of Main. variable main settable in the script also.
  - ◆ Wiki Name syntax is checked on create topic by menu
  - ◆ CSS declarations trimmed (and bugfixed) to be smaller. Simple pages went from 50k to 13k.
  - ◆ new KSNOICONS variable for the Web List topic
  - ◆ non-clickable links are now not white to differentiate them visually from clickable web tabs
- **1.11** *11 Apr 2002*
  - ◆ bugfix: was not working well if your directory structure differed from the distribution.  
**Note:** No need to upgrade if you had no problem installing the 1.10 version
- **1.10** *28 Mar 2002*
  - ◆ bugfix: editing failed (javascript error) on old versions (5.0) of IE.
- **1.9** *18 Mar 2002*
  - ◆ **[!]** Forgot to mention that the RefreshEditPage patch should be applied. Apply it if you didnt already!
  - ◆ Minor bug fix: QuietSave would not remove lock (change to bin/savemulti)
- **1.8** *12 Mar 2002*
  - ◆ Some fixes to the script to make it run on windows under cygwin.
- **1.7** *10 Mar 2002*
  - ◆ **[!]** Name of install topic changed from KoalaSkinPlugin to just KoalaSkin. You **must** rename the topic Plugins.KoalaSkinPlugin if you have one!
  - ◆ This readme is now fully in TWiki syntax. You should create the topic KoalaSkin to include it (it is installed as an attachment), see new install instructions.
  - ◆ script can be run from twiki dir without setting DIR
  - ◆ Created the official distribution page on TWiki: TWiki:Plugins/KoalaSkin
- **1.6** *8 Mar 2002*
  - ◆ fixes to colors in search results in bookview mode, and in rename topic (result of search for pages refering to page to be moved)
- **1.5** *4 Mar 2002*
  - ◆ **[!]** **NOTE:** if you already applied the fix TWiki:Codev/PostfixArgToParentMeta you need to change all 5 occurences of postfix to suffix in lib/TWiki.pm
  - ◆ -d option to bin/koalaskin-generate to generate a distrib
  - ◆ Note that the RefreshEditPage fix is not needed anymore (but is not harmful)
  - ◆ Use of the ?time=nnnn hack in edit pages
- **1.4** *28 Feb 2002*
  - ◆ **[!]** patches to apply: #3
  - ◆ new script bin/savemulti (needs a similar entry to save in bin/.htaccess), to provide in edit template 4 buttons: Save, Checkpoint, Preview, and Cancel
  - ◆ Raw view with metadata option in More... (new koala templates for oopsmore & preview)
  - ◆ understands the new var %EDITBOXCSS%
  - ◆ uses the new version of the PostfixToArgParentMeta
- **1.3** *24 Feb 2002*

- ◆ Checkpoint save
  - **1.2** *23 Feb 2002*
    - ◆ everything works (but with patches to distrib).
    - ◆ Announced on TWiki.org
  - **1.1** *20 Feb 2002*
    - ◆ First functional internal release.
  - *Nov 2001* First sketches in HTML+CSS by Thierry Kormann
