Using svn

- To get a package

```
svn co svn+ssh://<username>@svn.cern.ch/path localName
```

- Executing

```
svn info
```

in an svn controlled directory gives information on the package

- Using command

```
svn status
```

updated files will be shown

- Using command

```
svn update
```

files can be updated to the latest version. Be careful because local changes may be overwritten

- If you want to commit local changes use the command

```
svn ci -m "short message describing update"
```

- Changes must be described in ChangeLog file in the package with some details
- If you want to add a local file to the repository use

```
svn add FILENAME
```

and then remember to commit the change with

```
svn ci -m "short message describing update"
```

lor: transparent;"> what is the latest tagged version. Then you must call in your local folder, which you want to tag,
