

## Question

Hello,

this afternoon I created a topic: <https://twiki.cern.ch/twiki/bin/viewauth/Atlas/TDAQApprovedPlots20082010> which I want to delete (due to problems in moving attachments), however I tried twice and I got twice the same error message:

Internal Server Error The server encountered an internal error or misconfiguration and was unable to complete your request. Please contact the server administrator, [twiki.support@cernNOSPAMPLEASE.ch](mailto:twiki.support@cern.ch) and inform them of the time the error occurred, and anything you might have done that may have caused the error. More information about this error may be available in the server error log.

I cannot think of anything which might have caused this.

Thanks for your help, Nicoletta

## Environment

|                |             |

## Answer

**⚠ If you answer a question - or have a question you asked answered by someone - please remember to edit the page and set the status to answered. The status is in a drop-down list below the edit box.**

It is probable that you chose an option to check all possible references to the topic, which timed out. Please send all incidents (and this one) through Service Help Desk [☞](#)

In `more topic actions` there are options

- Delete topic... scans links in all public webs (recommended)
- Delete topic... scans links in Atlas web only

Chose the 2nd option
