

Question

Hi, I would like to restrict the access to some Topics in the CERN-TWiki.

I saw that the access in some topics is restricted throu TWikiGroups.

I think this groups are manganged through an LDAP-Interface, or something similar and not simply added to a list.

How can I create group like this and add people to it?

Thanks George

Answer

⚠ If you answer a question - or have a question you asked answered by someone - please remember to edit the page and set the status to answered. The status is in a drop-down list below the edit box.

Webs ot topics can be protected using TWikiAccessControl. To create a new group go to the bottom of TWikiGroups. Basically you create a new group by respecting the sytnax and then you can add users (or other groups) to the group in a comma delimited list
