

## Question

Hello, Through the twiki support I learned that to make twiki source hidden from view, wrap it in comment delimiters as follows:

```
<!--  
blablablablabla  
-->
```

I didn't see this tip on the twiki formatting instructions. Like any programming language, adding comments to your source is a common need and should be covered in any language description, however brief. Please add this tip to the instructions.

In particular, it might be worthwhile noting at the same time that the commented out section can contain twiki variable settings that remain in effect even if the section is "commented out".

Thanks!

## Answer

**⚠ If you answer a question - or have a question you asked answered by someone - please remember to edit the page and set the status to answered. The status is in a drop-down list below the edit box.**

Although I did find the information in the following I agree this could be documented better.

Access Control documentation and in a tip TWikiTip019
