

Question

I wrote my TWikiName to the notification page of our TWiki Web, but does not get any notification on changes. Tested it several times, but does not get it to work. Can someone tell me what we did wrong?

Answer

▲ If you answer a question - or have a question you asked answered by someone - please remember to edit the page and set the status to answered. The status is in a drop-down list below the edit box.

This appears to be linked with the web permissions. We have integrated egroups into the ACLs but the WebNotify only seems to work with TWikiNames and TWikiGroups. I added you to the TWikiGroup that has read access to this web.

This is something that we will have to correct for egroups
