# Support Web Preferences

The following settings are *web preferences* of the Support web. These preferences overwrite the *site-level preferences* in TWiki.TWikiPreferences and Main.TWikiPreferences, and can be overwritten by *user preferences* (your personal topic, eg: TWikiGuest in the Main web).

## Web Preferences Settings

- Set NEWTOPICFONTCOLOR = #000000

TestTheAboveSetting

- Categories for the EDITCELL in WebTopicEditTemplate
  - ◆ Set SUPPORTCATEGORIES = %EDITCELL{checkbox, 4, Add-Ons, Authentication, Browser issue, Contributing code, Documentation, Fatal error, Forms, General Usage, Mail, Missing functionality, Plugins, Performance, Permissions, Registration, Search, Security, Statistics, Skin, Tables, Version control}%

These settings override the defaults for this web only. See full list of defaults with explanation. Many of the settings below are commented out. Remove the # sign to enable a local customisation.

- List of topics of the Support web:
  - ◆ #Set WEBTOPICLIST = Changes | Index | Search | Go

#D0D0D0

- Web-specific background color: (Pick a lighter one of the StandardColors).
  - ◆ Set WEBBGCOLOR = #D0D0D0
  - ◆ **Note:** This setting is automatically configured when you create a web
- Image, URL and alternate tooltip text of web's logo.
  - Note:** Don't add your own local logos to the TWikiLogos topic; create your own logos topic instead.
  - ◆  #Set WEBLOGOIMG = 
  - ◆ #Set WEBLOGOURL = <http://www.cern.ch>
  - ◆ #Set WEBLOGOALT = CERN
- List this web in the SiteMap. If you want the web listed, then set SITEMAPLIST to on, do not set NOSEARCHALL, and add the "what" and "use to..." description for the site map. Use links that include the name of the web, i.e. Support.Topic links.
  - Note:** Unlike other variables, the setting of SITEMAPLIST is **not** inherited from parent webs. It has to be set in **every** web that is to be listed in the SiteMap
  - ◆ Set SITEMAPLIST = on
  - ◆ Set SITEMAPWHAT = Support web for discussions and FAQs
  - ◆ Set SITEMAPUSETO = ...collaborate on discussions and FAQs
  - ◆ **Note:** Above settings are automatically configured when you create a web
- Exclude web from a web="all" search: (Set to on for hidden webs).
  - ◆ Set NOSEARCHALL =
  - ◆ **Note:** This setting is automatically configured when you create a web
- Prevent automatic linking of WikiWords and acronyms (if set to on); link WikiWords (if empty); can be overwritten by web preferences:

- ◆ #Set NOAUTOLINK =
- ◆ **Note:** You can still use the `[[...]][...]` syntax to link topics if you disabled WikiWord linking. The `<noautolink> ... </noautolink>` syntax can be used to prevent links within a block of text.
- Default template for **new topics** for this web:
  - ◆ WebTopicEditTemplate: Default template for new topics in this web. (Site-level is used if topic does not exist)
  - ◆ TWiki.WebTopicEditTemplate: Site-level default topic template
- Comma separated list of **forms** that can be attached to topics in this web. See TWikiForms for more information.
  - ◆ Set WEBFORMS = WebForm
- specific settings:
  - ◆ Set STATUS\_REMINDER =
    - ▲ **If you answer a question - or have a question you asked answered by someone - please remember to edit the page and set the status to answered. The status is in a drop-down list below the edit box.**
  - ◆ Set SUPPORT\_SEARCH\_FORMAT = |SupportStatus).gif" width="16" height="16" alt="\$formfield(SupportStatus)" title="\$formfield(SupportStatus)" /> \$topic | r\$rev - \$date | \$wikiusername |\$n()| \$summary |||
- Users or groups who **are not / are** allowed to *view / change / rename* topics in the Support web: (See TWikiAccessControl). Remove the # to enable any of these settings. Remember that an empty setting is a valid setting; setting DENYWEBVIEW to nothing means that anyone can view the web.
  - ◆ Set DENYWEBVIEW =
  - ◆ Set ALLOWWEBVIEW =
  - ◆ Set DENYWEBCHANGE =
  - ◆ Set ALLOWWEBCHANGE =
  - ◆ Set DENYWEBRENAME =
  - ◆ Set ALLOWWEBRENAME =
- Users or groups allowed to change or rename this WebPreferences topic: (e.g., TWikiAdminGroup)
  - ◆ Set ALLOWTOPICCHANGE = TWikiAdminGroup
  - ◆ Set ALLOWTOPICRENAME = TWikiAdminGroup
- Web preferences that are **not** allowed to be overridden by user or topic preferences:
  - ◆ Set FINALPREFERENCES = NOSEARCHALL, ATTACHFILESIZELIMIT, WIKIWEBMASTER, WEBCOPYRIGHT, WEBTOPICLIST, DENYWEBVIEW, ALLOWWEBVIEW, DENYWEBCHANGE, ALLOWWEBCHANGE, DENYWEBRENAME, ALLOWWEBRENAME

## Help on Preferences

- A preference setting is defined by:
  - 3 or 6 spaces \* Set NAME = value
  - Example:
    - ◆ Set WEBBGCOLOR = #FFFC0
- A preferences setting can be disabled with a # sign. Remove the # sign to enable a local customisation. Example:
  - ◆ #Set DENYWEBCHANGE = UnknownUser
- Preferences are used as TWikiVariables by enclosing the name in percent signs. Example:
  - ◆ When you write variable %WEBBGOLOR% , it gets expanded to #D0D0D0

- The sequential order of the preference settings is significant. Define preferences that use other preferences first, i.e. set `WEBCOPYRIGHT` before `WIKIWEBMASTER` since `%WEBCOPYRIGHT%` uses the `%WIKIWEBMASTER%` variable.
- You can introduce your own preferences variables and use them in your topics and templates.

## Related Topics

- `TWiki.TWikiPreferences`, `Main.TWikiPreferences` - site-level preferences
- `UserList` - list of user topics. User topics can have optional user preferences
- `TWikiVariables` - list of common `%VARIABLES%`
- `TWikiAccessControl` - explains how to restrict access by users or groups

## Tools

-  **Rename, move or delete this web:**
  - ◆ **Rename/move/delete web...**, looking for references in *all public webs*. See also: `ManagingWebs`
