How to change compiler and linker flags

(This might be useful for example for profiling optimization with gprof.)

You need to change the compiler tool definition files available in
/config/toolbox/tools/selected/*/compiler.xml (* stands for c, cxx and ff77). In steps:

- change the cxxflags, cppdefines, ... in these files,
- run `scram setup`, e.g. `scram setup cxxcompiler`,
- cleanup old build: `scram build clean`,
- rebuild: `scram build`.

(Thanks to Shahzad MUZAFFAR.)
