# RequireRegistrationPlugin

Force externally authenticated users to register in case they do not have a TWiki account

## Introduction

This plugin will redirect a user to the TWikiRegistration topic if their login name is not a WikiWord, or optionally, if the user's profile page does not exist.

Use this if you have setup single sign-on (SSO) and want to force externally authenticated users to register to get their profile page before accessing any wiki content.

## Syntax Rules

- None, just install and configure it.

## Examples

- None. It just works.

## Plugin Installation Instructions

*Note:* You do not need to install anything on the browser to use this plugin. The following instructions are for the administrator who installs the plugin on the TWiki server.

- Download the ZIP file from the plugin web (see below)
- Unzip `RequireRegistrationPlugin.zip` in your twiki installation directory. Content:

File:	Description:
<code>data/TWiki/RequireRegistrationPlugin.txt</code>	Plugin topic
<code>lib/TWiki/Plugins/RequireRegistrationPlugin.pm</code>	Plugin Perl module
<code>lib/TWiki/Plugins/RequireRegistrationPlugin/Config.spec</code>	Spec file for configure

- Configure the Plugin:
  - ◆ Run the configure script
  - ◆ Enable the plugin in the Plugins section
  - ◆ Find the RequireRegistrationPlugin in the Extensions section and change these settings as needed:
    - ◇ `{Plugins}{RequireRegistrationPlugin}{Actions}` - comma-separated list of actions that this plugin should work on. Default actions: `attach, edit, viewfile`.
    - ◇ `{Plugins}{RequireRegistrationPlugin}{RequireProfileTopic}` - set to 1 if to check for existence of the user profile topic
    - ◇ `{Plugins}{RequireRegistrationPlugin}{Refresh}` - refresh time in seconds to do a meta refresh redirect to the registration page. Specify -1 to use an immediate redirect CGI query.
- Test if the installation was successful:
  - ◆ Log in as a user without a WikiName and edit a page - it should redirect to the registration topic.
  - ◆ You can add a conditional message in the registration topic to let users know what is happening. Use an IF statement to test for parameter `note=requireregistration`.

## Plugin Info

- One line description, shown in the TextFormattingRules topic:
  - ◆ Set SHORTDESCRIPTION = Force externally authenticated users to register in case they do not have a TWiki account
