CMS Preliminary $\sqrt{s}=7$ TeV $L=5.1$ fb$^{-1}$

The plot shows the distribution of events with muons in the final state, with bins on the x-axis representing mass in [GeV/c$^2$] and the y-axis showing the number of entries. The legend indicates several processes, including:

- $H(1000) \rightarrow XX(350)$, 1 pb
- QCD
- $t\bar{t}$
- $Z/\gamma^* \rightarrow \mu\mu$
- $Z/\gamma^* \rightarrow \tau\tau$
- $WW$
- $WZ$
- $ZZ$

The data points are represented by black squares. The processes are color-coded for easier identification.
