LIP-Lisbon invites applications for two postdoctoral research positions in the CMS experiment at CERN’s LHC.

The LIP/CMS group is active in top, Higgs, SUSY, B and quarkonia physics and rare decay searches, exploiting both the energy and luminosity frontiers offered by the LHC. The group has also important responsibilities in the operation, monitoring and upgrade of the CMS ECAL, PPS, and L1 trigger systems.

The appointments are initially for a period of two years, renewable for a second term of two years subject to mutual satisfaction and funding available. The positions are based in Lisbon. Qualifications required include a PhD in experimental particle physics and a clear demonstration of the ability to carry out a research program.

The nominal deadline for submitting applications is April 31st, 2015. The search will continue until the positions are filled. Applicants should submit a curriculum vitae, statement of physics interests, and arrange for three letters of recommendation to be sent to:
