Dear CMS members,

five junior post-doctoral (Assegno di Ricerca A2-type) positions are available at the Dipartimento di Fisica of the University of Milano-Bicocca [1]. The deadline for application is set to 2017, August 31. For these junior post-doctoral positions, the PhD degree is not formally required to be held by the candidate at the application deadline.

In the application, candidates should present a research plan within the research lines of the Physics Department. The CMS experiment is one of the research areas where the INFN and the Physics Department of Milano-Bicocca are active, with current involvement in the ECAL and the Pixel detectors, as well as in physics analyses in the Standard Model, Higgs, EXO and b-physics groups. In addition, we are contributing to the phase II upgrade of CMS in the pixel detector and in the newly proposed Mip Timing Detector. You may find more information on the research areas followed by our group and on the group interests at [2].

None of the available positions is reserved for the CMS group, but applications are encouraged. All positions will be assigned by a committee, upon scrutiny of the candidates, and of the quality of the research project.

Reference persons for research projects within the CMS experiment can be:
- prof. Alessio Ghezzi or prof. Tommaso Tabarelli
  (ECAL, MTD, Higgs, SM and BSM physics)
- prof. Mauro Dinardo
  (PIXEL and B-physics)

For further information do not hesitate to contact pietro.govoni@cern.ch or tommaso.tabarelli@cern.ch.

Regards,

Pietro Govoni
