The experimental high energy physics group at National Central University (NCUHEP) in Taiwan invites applications for a postdoctoral research fellow to work on the CMS experiment at the LHC. A PhD in experimental high energy physics is required. NCUHEP has made major contributions to the construction, commissioning, and software development of the ECAL Preshower. Our current major efforts are the physics analyses, including electroweak di-boson production, low mass Higgs search, and the searches for new physics with photons, and the understanding of performance of ECAL Preshower.

The successful candidate will have the opportunity to play a leading role in the CMS data analysis focusing on the physics involved photons in the final state and be in charge of the understanding of performance of ECAL Preshower. Permanent residence at CERN is expected.

For additional information please contact Dr. Chia-Ming Kuo. To apply please send a curriculum vitae, list of publications, three reference letters, and a statement of research interests to (email preferred):

Dr. Chia-Ming Kuo
Department of Physics
National Central University
Taiwan

E-mail : cmkuo (at) mail.cern.ch

Starting on 1st July, 2012
Deadline : Open until filled
