Postdoctoral Fellowship in Experimental Relativistic Heavy Ion Physics at Vanderbilt University

The Vanderbilt University experimental relativistic heavy ion physics group has an opening for a Postdoctoral Fellow. The group works on the CMS experiment at the Large Hadron Collider and the PHENIX experiment at Brookhaven National Laboratory. The candidate will be expected to focus on physics data analysis and may support the Tier-2 computing center for CMS. The possibility exists to work on a hardware or software project for sPHENIX. The successful candidate is expected to assist in the training of graduate students. The initial appointment period is for one year, with the possibility of renewal annually for three years contingent on the availability of research funds and adherence to standards of appropriate performance and conduct. Applications will be considered until position is filled; for full consideration, send materials before July 1, 2015.

Please send c.v. with references and cover letter to Vicki Greene at senta.v.greene@vanderbilt.edu.
