The Center for High Energy Physics at the University of Oregon invites applications for a postdoctoral research associate position in experimental high energy physics with the ATLAS experiment. Candidates should have Ph.D. in physics or a closely related field by the date of appointment and a demonstrated ability to perform high caliber, independent particle physics research as well as the capability to mentor students. The Oregon high energy physics group has a strong and exciting research program with major commitments to ATLAS at the LHC, the LIGO gravitational wave observatory, and detector development for a next-generation experiment at the ILC. The successful candidate will support the Oregon group's work on the ATLAS trigger system and play a leading role in ATLAS data analysis in searches for physics beyond the standard model in Run 2 of the LHC. Residence at CERN is expected, especially during the Run 2 commissioning in 2015.

We invite applications from qualified candidates who share our commitment to diversity. Interested candidates should send a CV, list of selected publications, and a brief statement of research interests to academicjobsonline.org. Applicants should also arrange to have three (3) letters of recommendation sent directly to the AJO website on their behalf. For more information, visit https://academicjobsonline.org/ajo/jobs/4457. To ensure consideration, please submit application materials by December 1. The position will remain open until filled. Inquiries may be addressed to David Strom (dstrom@uoregon.edu).

The University of Oregon is an equal opportunity, affirmative action institution committed to cultural diversity and compliance with the ADA. The University encourages all qualified individuals to apply, and does not discriminate on the basis of any protected status, including veteran and disability status.
