We invite applications for a postdoctoral position at the University of California, Los Angeles (UCLA). UCLA plays a leading role in searches for new phenomena using the Compact Muon Solenoid (CMS) experiment at the LHC, and in detector operations and upgrade construction.

The successful applicant will work most closely in the research group of Profs. Robert Cousins, Jay Hauser and David Saltzberg. The UCLA CMS group serves in leadership positions in the endcap muon detector system and its electronics. We are expanding our effort on searches, which until now have included Z', SUSY multileptons and slow particles, and understanding W+jets backgrounds. The postdoc will be located at CERN, along with the majority of the UCLA group.

The group is looking for an outstanding applicant who has obtained, or is about to obtain, a Ph.D. in Experimental Particle Physics. Applicants should send a CV, a list of publications to which he or she made a specific contribution, and a brief statement of research interests to cmspostdocsearch@physics.ucla.edu. Please arrange for three letters of recommendation to be sent to Profs. Cousins, Hauser and Saltzberg at the same email address.

Applications will be considered until the position is filled. However, for full consideration, materials should be submitted by June 30, 2012.

Women and minority candidates are urged to apply. The University of California is an Equal Opportunity/Affirmative Action Employer.
