

# High-pT bit responsibility

- High-pT ping is responsible for:
  - single-jet seeds
  - double-jet seeds (if they are requested)
  - single-EG seeds
  - double-EG seeds
  - centrality seeds
- Jet seed requests:
  - Twiki is up-to-date
  - No double-jet triggers requested yet
- EG seed requests:
  - twiki single-EG seeds up to date
  - double-EG seeds suggested within 3 hours (sorry for delay)
- Centrality seed requests
  - Centrality L1 bit logic is not correct in menu V0
    - Currently firing L1\_Centrality10\_30 fires all more-peripheral seeds, for example
    - L1 seeds should be changed to be exclusive, not greater-than-or-equal-to
  - Centrality bits are misaligned (L1\_Centrality70\_100 actually was 50\_70)
    - twiki page has proper alignment bits listed
