Empty Middleware Version	27	27	24
Not publishing Middleware Version	877	1034	1028

(*): The glue-validator version used in the July report also contains some fixes that will be released in the next version:

- Storage capacity total upper limit 1 billion GB instead of 1 million GB.
- Workaround in the storage capacity calculation to deal with current DPM publication (Total=Reserved in space tokens, and no Reserved published for Service Capacity).
- Tolerances of ± 1.05 added to the storage capacity checks.

Sites that could not be contacted in July:	UKI-LT2-QMUL USC-LCG2 SIGNET
--	------------------------------------

Actions after the validation assessment

Specific actions have been carried out for the sites having more than 200 errors. Further actions on storage capacity have been also carried out and tracked in:

https://twiki.cern.ch/twiki/bin/view/EGEE/GLUEMonitoring#Storage_Service_and_Share_Capaci.

UKI-NORTHGRID-SHEF-HEP	Few obsolete entries left when checking again	NA	NA

Status of actions tracked in the previous report

Site/Service/glue-validator	Description	Associated GGUS ticket	State
NDGF-T1 SE-SNIC-T2 NO-NORGRID-T2	ARC sites seem to share a common site BDII (the one in SE-SNIC-T2). However, each site declares its own site BDII in GOCDDB. The structure of the site BDIIs in GOCDDB don't seem to be coherent and the LDAP trees are inconsistent.	Discussions with ARC experts and sys admins are on-going. Some tickets have been opened already to track specific issues: Obsolete GLUE2EntityCreationTime (this creates most of the glue-validator errors): https://ggus.eu/ws/ticket_info.php?ticket=94092 https://ggus.eu/ws/ticket_info.php?ticket=94091 No GLUE 2.0 resources are published: https://ggus.eu/ws/ticket_info.php?ticket=94095	It seems to be fixed but the sites haven't confirmed so in the tickets.
UKI-NORTHGRID-MAN-HEP	Obsolete GLUE2EntityCreationTime due to https://savannah.cern.ch/bugs/?101237	None. When this was checked again, there were no longer obsolete entries anymore. The site must have restarted the BDII or clean out the entries themselves.	Still 1 obsolete entry
CA-MCGILL-CLUMEQ-T2			No obsolete entries
INFN-FRASCATI			Obsolete entries back
GR-07-UOI-HEPLAB			No obsolete entries
MPPMU			https://ggus.eu/ws/ticket_info.php?ticket=94997 No obsolete entries
IFCA-LCG2			https://ggus.eu/ws/ticket_info.php?ticket=94999 Obsolete entries back
BUDAPEST			https://ggus.eu/ws/ticket_info.php?ticket=95000 Still few obsolete entries
UKI-NORTHGRID-LANCS-HEP	Same situation as the previous report. Most errors are caused for CreationTime in the future due to glue-validator bug	NA	Fixed

Summary per error type

The most common errors are all related to known bugs in the Information Providers:

- Missing Mandatory attributes (WARNING)
- Missing Recommended attributes (INFO)
- Wrong types (WARNING)

The number of obsolete entries have been dramatically reduced (5707 in July with respect to 106602 in June). This is because BDIs are upgrading to newer versions containing the fix for the GLUE 2 delete bug.

The number of errors for creation time in the future has been also reduced after adding in glue-validator a range of +- 1 minute.

For the messages related to the CREAM CE information:

- Default values could be due to site batch system misconfiguration. It would be interesting to consider differentiating a real default value that is configured by the site from a misconfigured value.
- High number of ERT and WRT is under investigation with the CREAM CE developers, but it looks like it could also be related to misconfigured batch systems since these values are calculated based on the batch system values.
- Incoherent number of total jobs is due to the 444444 issue (<https://wiki.egi.eu/wiki/Tools/Manuals/TS59>).

For storage capacity errors, after increasing the total capacity size to 1 billion GB and applying a workaround in glue-validator to match the way capacity free, used, reserved and total sizes are calculated, there are also fewer messages. The details on how these numbers are calculated in DPM, dCache and StoRM, and the applied workarounds in glue-validator, have been understood and reported in: https://twiki.cern.ch/twiki/bin/view/EGEE/GLUEMonitoring#Storage_Service_and_Share_Capaci.
