Actions after the validation assessment

Affected sites	Description	Associated GGUS ticket
NDGF-T1 SE-SNIC-T2 NO-NORGRID-T2	ARC sites seem to share a common site BDII (the one in SE-SNIC-T2). However, each site declares its own site BDII in GOCDB. The structure of the site BDII in GOCDB don't seem to be coherent and the LDAP trees are inconsistent.	Discussions with ARC experts and sys admins are on-going. Some tickets have been opened already to track specific issues: Obsolete GLUE2EntityCreationTime (this creates most of the glue-validator errors): https://ggus.eu/ws/ticket_info.php?ticket=94092 https://ggus.eu/ws/ticket_info.php?ticket=94091 No GLUE 2.0 resources are published: https://ggus.eu/ws/ticket_info.php?ticket=94095
UKI-LT2-RHUL	Obsolete GLUE2EntityCreationTime (this creates most of the glue-validator errors). Tickets have been opened to understand whether this could be due to https://savannah.cern.ch/bugs/?101237	https://ggus.eu/ws/ticket_info.php?ticket=94096
CA-VICTORIA-WESTGRID-T2		https://ggus.eu/ws/ticket_info.php?ticket=94097
UKI-SOUTHGRID-RALPP		https://ggus.eu/ws/ticket_info.php?ticket=94099
UKI-NORTHGRID-MAN-HEP		https://ggus.eu/ws/ticket_info.php?ticket=94100
IN2P3-CC-T2		https://ggus.eu/ws/ticket_info.php?ticket=94101
IFIC-LCG2		https://ggus.eu/ws/ticket_info.php?ticket=94102
UKI-NORTHGRID-LANCS-HEP RO-02-NIPNE	Most errors are caused by a GLUE2EntityCreationTime in the future. After looking into this error in detail, there are a few seconds of difference with the machine where the validator was run. Maybe a margin should be added to the validator.	NA

Status of special attributes

The following attributes have been reported to be important for the experiments:

LHCb

- **GLUE2ComputingShareMaxCPUTime**: The content of this attribute is validated by the test `test_GLUE2ComputingShareMaxCPUTime_OK` which checks whether the attribute is publishing a default value. The current status for WLCG is 729 failed tests giving the info message: `1029 - Default value published (GLUE2ComputingShareMaxCPUTime)`. As documented in https://twiki.cern.ch/twiki/bin/view/EGEE/ISproviders#GluePolicy_GLUE2ComputingShare_a, sys admins need to make sure the batch system attributes used by the CREAM info provider are properly defined so this is reflected in the Information System. Since this is a very important attribute for LHCb, it should be considered to raise the info message to an error message so this could be properly treated by EGI operations when glue-validator is finally running as a Nagios probe.
