Title of talk		
Abstract		

Relevance of participation for EMI	One of the tasks within EMI jra1-data is to simplify the specification of the Storage Resource Manager. As the SRM protocol is under control of the Open Grid Forum (SRM working group) all activities have to be coordinated within OGF. During the SRM working group meeting (Lead : Jens Jensens, Timur Perelmutov) agreements were made on how to continue with a final, simplified version of the SRM, suitable for EMI needs.
