

EMI Collaboration Programs

Diana Cresti, INFN
EMI NA2 Manager
dcresti@pd.infn.it

Overview collaboration strategy

- Seamless integration in DCI ecosystem
- Specific approach to technology partnerships
- Direct, pragmatic and proactive relationships with users of the middleware
- Works with EMI

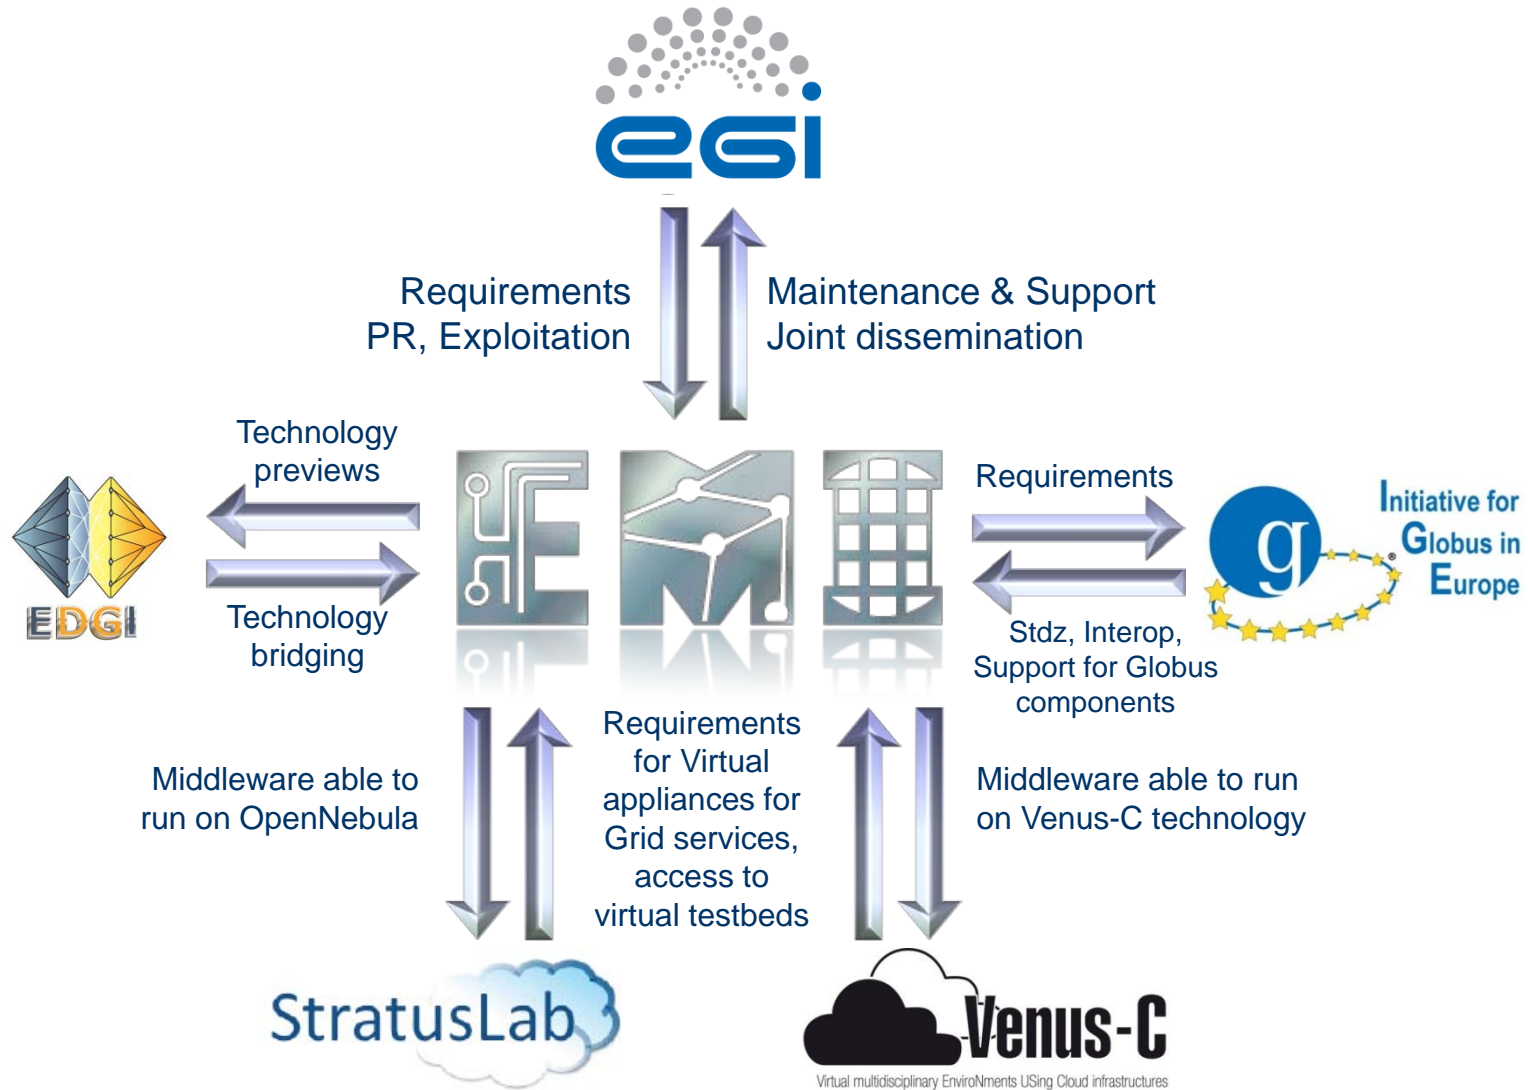

Slide from Alberto

DCI Collaboration

- Dedicated to the specific collaboration program among the six DCI projects
 - EDGI
 - EGI_InSPIRE
 - EMI
 - IGE
 - StratusLab,
 - VENUS-C
- Common document in the works

EMI in the DCI Collaboration

Technology collaboration approach

- EMI participation in standardization activities => pragmatic, goal-oriented, proactive
 - Collaboration with SIENA
- Commercial partnerships:
 - Google (MoU in place)
 - Red Hat (discussions ongoing)

Technical user collaboration

- Our highest priority is to produce middleware that satisfies the needs of our users
- In particular, we wish to work with site administrators, application developers, developers of application integration software (e.g. portals), developers of complementary services, etc.
- Several contacts with these communities and VRC representatives are already established
- Collaborations with ESFRI technical representatives are gradually emerging

Technical user collaboration

- Flexible collaboration environment:
 - MoUs
 - Workshops / Special meetings
 - Arrange usability studies
 - Support for project proposals
 - SLAs
 - EMI Web community
 - For developers of applications, high level tools, portals, etc., a specific tailored program...

Works with EMI

- Based on MoU
- EMI Technology Preview
- Access to EMI development testbed for validation of implementation of functional requirements
- Dedicated technical support
- Works-with-EMI community tools

Improving the User Experience

- We are here to listen
- Two user community presentations, followed by general discussion
- Suggestions for further collaboration channels are welcome

Thank you!

EMI is partially funded by the European Commission under Grant Agreement RI-261611
