

# Contents

<b>1</b>	<b>Introduction</b>	<b>1</b>
1.1	The LHC machine . . . . .	2
1.2	Coordinate conventions . . . . .	4
1.3	Physics and detector requirements . . . . .	4
1.3.1	Summary of detector requirements . . . . .	6
1.4	Experimental challenge . . . . .	7
1.5	CMS: the overall concept . . . . .	7
1.5.1	Magnet . . . . .	9
1.5.2	Muon system . . . . .	11
1.5.3	Electromagnetic calorimeter . . . . .	14
1.5.4	Hadron calorimeter . . . . .	15
1.5.5	Inner tracking system . . . . .	18
1.5.6	Trigger and data acquisition . . . . .	21
1.5.7	Software and computing . . . . .	24
1.5.8	Performance: mass resolutions . . . . .	24
1.5.9	Radiation levels in CMS . . . . .	24
1.6	The current state of the construction, installation and commissioning of CMS	25
<b>2</b>	<b>Software Components</b>	<b>28</b>
2.1	CMS software architecture . . . . .	28
2.1.1	Requirements . . . . .	29
2.1.2	Architecture design . . . . .	29
2.1.3	Software domain decomposition . . . . .	30
2.2	Framework . . . . .	31
2.2.1	Event Data Model–data access . . . . .	31
2.2.2	Framework-module types and communication . . . . .	32
2.2.3	Framework services . . . . .	35
2.3	Event Filter . . . . .	38
2.3.1	Filter Farm architecture . . . . .	40
2.3.2	Data flow . . . . .	41
2.3.3	Control flow . . . . .	44
2.4	Detector description . . . . .	45
2.4.1	Geometry Service . . . . .	46
2.4.2	Detector numbering scheme . . . . .	46

2.5	Simulation . . . . .	47
2.5.1	Generation of physics events . . . . .	48
2.5.2	Detailed simulation framework . . . . .	48
2.5.3	Pile-up treatment . . . . .	49
2.5.4	Digitization of simulated detector hits . . . . .	50
2.5.5	Simulation physics validation and performance . . . . .	52
2.6	Fast simulation . . . . .	55
2.6.1	Simulation of the tracker response . . . . .	56
2.6.2	Simulation of the calorimeter response to electrons and photons . . . . .	58
2.6.3	Simulation of the calorimeter response to hadrons . . . . .	60
2.6.4	Simulation of the detector response to muons . . . . .	61
2.7	Event selection and reconstruction . . . . .	65
2.7.1	Organization of the reconstruction code . . . . .	66
2.7.2	Local reconstruction . . . . .	67
2.7.3	Global reconstruction . . . . .	67
2.7.4	Combined reconstruction–high level objects . . . . .	68
2.8	Calibration and alignment . . . . .	70
2.8.1	Different source of technical data . . . . .	70
2.8.2	Calibration and alignment data . . . . .	72
2.8.3	Calibration and alignment model . . . . .	74
2.9	Data quality monitoring . . . . .	76
2.9.1	Architecture . . . . .	76
2.9.2	Components and data flow . . . . .	77
2.9.3	Control flow . . . . .	79
2.9.4	Subdetector monitoring . . . . .	80
2.10	Visualization . . . . .	80
2.10.1	Design of visualization software . . . . .	81
2.10.2	CMS visualization applications . . . . .	83
2.11	Software development environment, quality assurance, and testing . . . . .	85
2.11.1	Description and general concept . . . . .	85
2.11.2	Code management . . . . .	86
2.11.3	External packages . . . . .	87
2.11.4	Platforms and compilers . . . . .	87
2.11.5	Releases and release strategy . . . . .	87
2.11.6	Code distribution . . . . .	88
2.11.7	Documentation . . . . .	89
2.11.8	User support and mailing lists . . . . .	89
2.11.9	Software testing and validation . . . . .	89
<b>3</b>	<b>Muon System</b>	<b>92</b>
3.1	System overview . . . . .	92
3.1.1	Detector layout . . . . .	92

3.1.2	Readout . . . . .	95
3.1.3	Data formats . . . . .	96
3.2	Operations . . . . .	97
3.2.1	Calibration . . . . .	97
3.2.2	Alignment . . . . .	101
3.2.3	Monitoring . . . . .	109
3.2.4	Databases . . . . .	111
3.3	Detector response . . . . .	114
3.3.1	Simulation . . . . .	114
3.3.2	Simulation and test-beam comparisons . . . . .	117
3.4	Level-1 trigger . . . . .	123
3.4.1	Overview of Level-1 muon trigger algorithms . . . . .	123
3.4.2	DT trigger . . . . .	124
3.4.3	CSC trigger . . . . .	124
3.4.4	RPC trigger . . . . .	125
3.4.5	Global Muon Trigger . . . . .	125
3.4.6	Test beam results and trigger emulator . . . . .	126
3.4.7	Muon trigger performance and trigger rates . . . . .	126
3.5	Detector Level Reconstruction . . . . .	130
3.5.1	Position reconstruction and track-segment reconstruction in the barrel drift tubes . . . . .	130
3.5.2	Clusterization and track-segment reconstruction in the endcap cathode strip chambers . . . . .	132
3.5.3	Clusterization in resistive plate chambers . . . . .	135
3.5.4	Comparisons with data . . . . .	136
3.5.5	RPC cosmic-ray tests . . . . .	137
3.6	Commissioning . . . . .	139
3.6.1	Detector start-up scenario . . . . .	139
3.6.2	Synchronization . . . . .	139
3.6.3	Muon triggers . . . . .	143
3.6.4	Momentum calibration . . . . .	144
<b>4</b>	<b>Electromagnetic Calorimeter</b>	<b>146</b>
4.1	Description of the ECAL . . . . .	146
4.1.1	The ECAL layout and geometry . . . . .	146
4.1.2	Lead tungstate crystals . . . . .	148
4.1.3	Photodetectors . . . . .	148
4.1.4	Preshower detector . . . . .	150
4.2	Readout electronics . . . . .	151
4.2.1	Front end . . . . .	151
4.2.2	Off-detector electronics . . . . .	152
4.2.3	Trigger and readout . . . . .	154
4.2.4	Trigger primitive generation . . . . .	155

4.2.5	Selective readout . . . . .	156
4.2.6	Preshower electronics . . . . .	158
4.2.7	Synchronization . . . . .	160
4.3	Detector performance . . . . .	163
4.3.1	Amplitude reconstruction . . . . .	164
4.3.2	Energy resolution in test beam . . . . .	166
4.4	Calibration and alignment . . . . .	168
4.4.1	Intercalibration at start-up . . . . .	169
4.4.2	Phi independence . . . . .	172
4.4.3	Intercalibration using single electrons . . . . .	175
4.4.4	Use of $Z \rightarrow ee$ . . . . .	180
4.4.5	Intercalibration from $\pi^0$ and $\eta \rightarrow \gamma\gamma$ events . . . . .	184
4.4.6	Inner bremsstrahlung photons in $Z$ boson decays to muons . . . . .	186
4.4.7	Preshower calibration . . . . .	187
4.4.8	Correction for crystal transparency changes . . . . .	189
4.4.9	Alignment . . . . .	194
4.4.10	Conditions/calibration database . . . . .	194
4.5	Monitoring . . . . .	195
4.5.1	Monitoring of operational conditions . . . . .	195
4.5.2	Monitoring using events . . . . .	197
<b>5</b>	<b>Hadron Calorimeter</b>	<b>199</b>
5.1	HCAL design . . . . .	199
5.2	Detector operation . . . . .	204
5.2.1	Data path and event format . . . . .	204
5.2.2	Level-1 trigger . . . . .	206
5.2.3	Synchronization and timing . . . . .	206
5.3	HCAL Calibration . . . . .	209
5.3.1	Charge injector calibration for the ADC . . . . .	209
5.3.2	Radioactive source calibration . . . . .	210
5.3.3	Offline calibration and monitoring . . . . .	215
5.3.4	Database . . . . .	215
5.4	HCAL performance in test beams . . . . .	216
5.4.1	Longitudinal shower shape and magnetic field brightening . . . . .	217
5.4.2	Response and resolution . . . . .	219
5.4.3	Low energy $e/\pi$ response . . . . .	220
5.4.4	Cluster-based response compensation . . . . .	222
<b>6</b>	<b>Inner Tracking System</b>	<b>225</b>
6.1	Simulation . . . . .	225
6.1.1	Simulated geometry . . . . .	225
6.1.2	Simulation of the detector response . . . . .	226
6.2	Data handling . . . . .	233

6.2.1	Databases . . . . .	233
6.2.2	Data format and size . . . . .	235
6.3	Configuration of the tracker hardware and electronics . . . . .	237
6.3.1	Configuration of the Pixel tracker . . . . .	237
6.3.2	Configuration of the Silicon Strip Tracker . . . . .	239
6.4	Track reconstruction . . . . .	240
6.4.1	Tracker clusterization . . . . .	241
6.4.2	Seed generation . . . . .	244
6.4.3	Pattern recognition . . . . .	246
6.4.4	Ambiguity resolution . . . . .	251
6.4.5	Track fitting and smoothing . . . . .	251
6.4.6	Track reconstruction performance . . . . .	252
6.4.7	Fast track reconstruction with pixel detector only . . . . .	255
6.4.8	Track reconstruction in heavy-ion collisions . . . . .	255
6.5	Vertex reconstruction . . . . .	260
6.5.1	Vertex fitting . . . . .	261
6.5.2	The kinematic vertex fit . . . . .	264
6.5.3	Primary-vertex finding with Pixel Tracks . . . . .	264
6.5.4	Primary-vertex finding using fully reconstructed tracks . . . . .	266
6.5.5	Influence of tracker misalignment on vertex reconstruction . . . . .	268
6.5.6	Secondary-vertex reconstruction . . . . .	270
6.6	Alignment . . . . .	277
6.6.1	General alignment strategy . . . . .	277
6.6.2	Alignment data samples . . . . .	278
6.6.3	Laser Alignment System . . . . .	279
6.6.4	Simulation of misalignment . . . . .	281
6.6.5	Track-based alignment . . . . .	283
6.6.6	Alignment of a test-beam setup . . . . .	289
6.7	Data quality monitoring . . . . .	290
6.7.1	Quantities to monitor . . . . .	291
6.7.2	CPU estimate and requirements . . . . .	292
6.7.3	Event-display-based monitoring . . . . .	293
<b>7</b>	<b>Forward Detectors</b> . . . . .	<b>295</b>
7.1	Overview . . . . .	295
7.2	The Castor Calorimeter . . . . .	297
7.2.1	Description of the calorimeter . . . . .	297
7.2.2	Beam test results . . . . .	298
7.3	The Zero Degree Calorimeter . . . . .	306
7.3.1	Description of the calorimeter . . . . .	307
7.3.2	Calibration . . . . .	311
7.3.3	Trigger and DAQ . . . . .	311

7.3.4	Heat dissipation . . . . .	312
7.3.5	Performance . . . . .	312
7.4	Trigger for common CMS/TOTEM runs . . . . .	312
<b>8</b>	<b>Luminosity Measurement</b>	<b>315</b>
8.1	Introduction and overview . . . . .	315
8.1.1	Relevant definitions . . . . .	315
8.1.2	Goals and requirements . . . . .	315
8.1.3	General strategy . . . . .	316
8.2	LHC beam parameters . . . . .	316
8.3	Online techniques . . . . .	317
8.3.1	HF . . . . .	317
8.3.2	Pixel Luminosity Telescope . . . . .	320
8.4	Offline and normalization techniques . . . . .	328
8.4.1	TOTEM . . . . .	328
8.4.2	$W$ and $Z$ rate measurements . . . . .	329
8.5	Sources of systematic effects . . . . .	329
8.6	Luminosity monitoring, reporting, and logging . . . . .	330
8.6.1	Luminosity accounting . . . . .	330
<b>9</b>	<b>Muons</b>	<b>332</b>
9.1	Muon reconstruction . . . . .	332
9.1.1	Standalone muon reconstruction . . . . .	332
9.1.2	Global muon reconstruction . . . . .	333
9.1.3	Performance . . . . .	334
9.1.4	Cosmic-ray and beam-halo muon reconstruction . . . . .	338
9.1.5	Dimuon reconstruction in heavy-ion collisions . . . . .	343
9.2	Muon identification . . . . .	344
9.2.1	Algorithm . . . . .	345
9.2.2	Performance . . . . .	349
9.3	Muon isolation . . . . .	351
9.3.1	Principles of the muon-isolation algorithms . . . . .	351
9.3.2	Online event selection . . . . .	353
9.3.3	Example of the isolation procedure applied offline . . . . .	356
9.3.4	Sensitivity of the muon isolation cut efficiency to the underlying event uncertainties . . . . .	357
9.4	High-Level trigger . . . . .	360
9.4.1	Performance . . . . .	360
9.4.2	High-Level trigger for muons in heavy-ion collisions . . . . .	360
<b>10</b>	<b>Electrons and Photons</b>	<b>365</b>
10.1	ECAL clustering and superclustering . . . . .	365
10.1.1	Superclustering algorithms . . . . .	365

10.1.2	Algorithmic energy corrections . . . . .	366
10.1.3	Position measurement . . . . .	367
10.1.4	Corrections for saturated channels . . . . .	367
10.2	Electron and photon trigger . . . . .	368
10.2.1	Level-1 trigger . . . . .	368
10.2.2	HLT selection of electron and photon candidates . . . . .	370
10.3	Photon reconstruction and selection . . . . .	375
10.3.1	Photon energy reconstruction . . . . .	375
10.3.2	Photon isolation . . . . .	376
10.3.3	Converted photons . . . . .	383
10.3.4	$\pi^0$ rejection . . . . .	388
10.3.5	Offpointing photons . . . . .	389
10.4	Electron reconstruction and selection . . . . .	390
10.4.1	Electron clustering . . . . .	391
10.4.2	Electron tracking . . . . .	392
10.4.3	Electron classes . . . . .	395
10.4.4	Electron energy scale corrections . . . . .	397
10.4.5	Track-cluster combination . . . . .	399
10.4.6	Electron isolation . . . . .	401
10.4.7	Electron identification . . . . .	401
<b>11</b>	<b>Jets and Missing Transverse Energy</b>	<b>404</b>
11.1	Tower definition and thresholds . . . . .	404
11.2	Jet algorithms . . . . .	407
11.2.1	Iterative cone . . . . .	407
11.2.2	Midpoint cone . . . . .	408
11.2.3	Inclusive $k_T$ algorithm . . . . .	408
11.3	Monte Carlo corrections . . . . .	409
11.4	Jet resolution . . . . .	409
11.5	Missing transverse energy . . . . .	411
11.5.1	Comparison with UA1 and CDF . . . . .	413
11.5.2	Resolution in minimum bias events . . . . .	414
11.5.3	Missing transverse energy resolution in QCD events . . . . .	414
11.5.4	Corrections to $\mathbf{E}_T^{\text{miss}}$ . . . . .	416
11.5.5	Angular resolution . . . . .	419
11.6	Jet calibration . . . . .	420
11.6.1	Data-driven calibration strategy . . . . .	421
11.6.2	Dijet balancing . . . . .	422
11.6.3	$\gamma$ +jet events . . . . .	423
11.6.4	Parton-level corrections . . . . .	427
11.6.5	Jet energy scale calibration using the $W$ boson mass constraint in top quark events . . . . .	428

11.7	Association of jets with the signal vertex . . . . .	431
11.8	Jet energy correction using charged tracks . . . . .	432
11.9	Jet reconstruction in heavy-ion collisions . . . . .	432
11.9.1	Background subtraction algorithm . . . . .	434
11.9.2	Performance of jet reconstruction . . . . .	435
<b>12</b>	<b><i>b</i> and <math>\tau</math> Tagging</b>	<b>437</b>
12.1	$\tau$ tagging tools . . . . .	437
12.1.1	Tau properties relevant to $\tau$ -jet reconstruction and identification . . . . .	437
12.1.2	Methods for $\tau$ tagging and performance . . . . .	441
12.1.3	High Level Trigger . . . . .	453
12.1.4	Calibration and tagging efficiency . . . . .	458
12.2	<i>b</i> -tagging tools . . . . .	461
12.2.1	General features . . . . .	461
12.2.2	Track impact parameter based tags . . . . .	463
12.2.3	Combined secondary vertex tag . . . . .	466
12.2.4	Soft lepton tags . . . . .	468
12.2.5	Performance of <i>b</i> -tagging algorithms . . . . .	471
12.2.6	HLT <i>b</i> tag . . . . .	473
12.2.7	Robustness of the performance . . . . .	476
12.2.8	Performance studies with data . . . . .	478
