1	Introduction	1
1.1	The full analyses	2
1.2	The physics reach	4
1.3	Tools used in the studies for the PTDR	5
1.3.1	Detector simulation and reconstruction	5
1.3.2	Pile-Up Treatment	5
1.3.3	Systematic effects on measurements	6
1.3.4	Event generators	6
1.3.5	Parton distributions and higher order corrections	7
1.4	Outlook	7
I	Complete Analyses	9
2	Physics Studies with Photons and Electrons	11
2.1	Benchmark Channel: $H \rightarrow \gamma\gamma$	11
2.1.1	Higgs boson production and decay	12
2.1.2	Backgrounds	12
2.1.3	Reconstruction, selection, and signal significance calculation	15
2.1.4	Cut-based analysis	17
2.1.5	Optimised analysis estimating s/b for each event	22
2.1.6	Measurement of the Higgs boson mass	30
2.1.7	Summary	30
2.2	Benchmark channel: $H \rightarrow ZZ^{(*)} \rightarrow 4$ electrons	31
2.2.1	Datasets for signal and background processes	31
2.2.2	Data reduction	33
2.2.3	Event selection and kinematic reconstruction	36
2.2.4	Systematics	39
2.2.5	$H \rightarrow 4e$ Observability, mass and cross-section measurements	44
3	Physics Studies with Muons	49
3.1	Benchmark Channel: $H \rightarrow ZZ^{(*)} \rightarrow 4$ muons	49
3.1.1	Physics processes and their simulation	49
3.1.2	Event selection	51
3.1.3	Higgs boson search analysis	52

3.1.4	Measurement of the Higgs boson properties at $\mathcal{L} = 30 \text{ fb}^{-1}$	58
3.1.5	Conclusions	62
3.2	Benchmark Channel: $H \rightarrow WW^{(*)} \rightarrow 2 \text{ muons}$	63
3.2.1	Introduction	63
3.2.2	Physics processes	64
3.2.3	Event selection	65
3.2.4	The trigger selection	65
3.2.5	Jet reconstruction and the jet veto	67
3.2.6	Missing energy reconstruction and the MET cut	68
3.2.7	The selection results	70
3.2.8	Background estimation and systematics	71
3.2.9	$t\bar{t}$ background normalisation	71
3.2.10	WW background normalisation	74
3.2.11	Other backgrounds normalisation	76
3.2.12	Detector misalignment systematics	77
3.2.13	Signal significance	77
3.2.14	Conclusions	78
3.3	Benchmark Channel: $Z' \rightarrow \mu\mu$	79
3.3.1	Introduction	79
3.3.2	Signal and background processes	79
3.3.3	Event selection	81
3.3.4	Signal observability	82
3.3.5	Distinguishing among Z' models	89
3.3.6	Discriminating between different spin hypotheses	90
4	Physics Studies with Jets and E_T^{miss}	95
4.1	Benchmark Channel: new physics from dijets	95
4.1.1	Dijet analysis	95
4.1.2	Rates and efficiencies from jet triggers	95
4.1.3	Dijet mass distribution from QCD	96
4.1.4	Searches using dijet mass	97
4.1.5	Searches using dijet mass and angle	98
4.1.6	Systematic uncertainties	99
4.2	Benchmark Channel: low mass supersymmetry	101
4.2.1	Introduction	101
4.2.2	Jets and missing transverse energy at CMS	102
4.2.3	Clean-up requirements	102
4.2.4	Analysis path	102
4.2.5	Missing transverse energy in QCD production	103
4.2.6	Indirect Lepton Veto	105
4.2.7	The standard Z boson “candle” calibration	106
4.2.8	Analysis results	108

4.2.9	Systematic uncertainties	108
4.2.10	Discussion	111
5	Physics Studies with Tracks, B mesons, and taus	113
5.1	Benchmark Channels: study of the decay $B_s \rightarrow J/\psi\phi$	113
5.1.1	Introduction	113
5.1.2	Event generation	114
5.1.3	Trigger selection	115
5.1.4	Offline selection and reconstruction	117
5.1.5	The maximum likelihood analysis	118
5.1.6	Result	122
5.1.7	Systematics and detector effects	123
5.1.8	Conclusion	126
5.2	Associated production of MSSM heavy neutral Higgs bosons $b\bar{b}H(A)$ with $H(A) \rightarrow \tau\tau$	126
5.2.1	Introduction	126
5.2.2	Event generation	127
5.2.3	Level-1 and High Level trigger selections	127
5.2.4	Off-line event selection	128
5.2.5	Method of the Higgs boson mass reconstruction	129
5.2.6	$H \rightarrow \tau\tau \rightarrow 2\tau + \text{jet}$ analysis	129
5.2.7	$H \rightarrow \tau\tau \rightarrow \mu + \text{jet}$ analysis	136
5.2.8	$H \rightarrow \tau\tau \rightarrow e + \text{jet}$ analysis	141
5.3	Benchmark Channels: $t\bar{t}H, H \rightarrow b\bar{b}$	148
5.3.1	Introduction	148
5.3.2	Event generation and simulation	149
5.3.3	Level-1 and high level trigger selections	150
5.3.4	Reconstruction	150
5.3.5	Event selection	155
5.3.6	Discussion of systematic uncertainties	160
5.3.7	Combined significance	162
6	Physics Studies with Heavy Ions	165
6.1	Benchmark Channel: $PbPb \rightarrow Q\bar{Q} + X \rightarrow \mu^+\mu^- + X$	165
6.1.1	Simulation of physics and background processes	165
6.1.2	Reconstruction and analysis	166
6.1.3	Results	168
6.1.4	Conclusions	171
II	CMS Physics Reach	173
7	Physics of Strong Interactions	175

7.1	QCD and jet physics	175
7.1.1	Introduction	175
7.1.2	Jet algorithms	175
7.1.3	Trigger scheme, event selection and phase space	177
7.1.4	Input data	178
7.1.5	Jet energy calibration	178
7.1.6	NLO calculation	178
7.1.7	Experimental and theoretical uncertainties	178
7.1.8	Summary and outlook	179
7.2	Underlying event studies	180
7.2.1	Definition of the physics process and status of the art	180
7.2.2	Underlying event observables discussed for charged jet events	181
7.2.3	Feasibility studies	182
7.2.4	Conclusions	185
7.3	Physics of b-quarks and hadrons	185
7.3.1	Inclusive b-quark production	185
7.3.2	Study of B_c hadrons	191
7.4	Diffraction and forward physics	195
7.4.1	Introduction	195
7.4.2	The interest of diffractive interactions	195
7.4.3	A survey of the accessible diffractive/forward processes	196

7.5.3	Gluon saturation and QGP colour screening via Quarkonia	204
8	Physics of Top Quarks	205
8.1	Selection of $t\bar{t}$ events and measurement of the cross sections	205
8.1.1	Introduction	205
8.1.2	Dileptonic channel	205
8.1.3	Semi-leptonic channel	210
8.1.4	Fully hadronic channel	211
8.2	Measurement of the top quark mass	215
8.2.1	Dileptonic events	215
8.2.2	Semi-leptonic events	216
8.2.3	Fully hadronic events	219
8.2.4	Top quark mass from J/ψ final states	221
8.2.5	Summary of top mass determinations	227
8.3	Spin correlation in top-quark pair production	227
8.3.1	Introduction	227
8.3.2	Simulation of $t\bar{t}$ with spin correlation	228
8.3.3	Online and offline event selection	229

8.3.4	Estimation of correlation coefficient	230
8.4	Single top quark production	231
8.4.1	Introduction	231
8.4.2	Selection and cross section - t -channel	234
8.4.3	Selection and cross section - tW -channel	236
8.4.4	Selection and cross section - s -channel	240
8.4.5	Conclusion	243
8.5	Search for flavour changing neutral currents in top decays	243
8.5.1	Introduction	243
8.5.2	Signal and background generation	244
8.5.3	Selection strategies	244
8.5.4	Sensitivity estimation	245
9	Electroweak Physics	247
9.1	Production of W and Z bosons	247
9.1.1	Introduction	247
9.1.2	W/Z into electrons	247
9.1.3	W/Z into muons	251
9.1.4	Parton distribution functions and parton luminosities	254
9.2	Muon pairs from the Drell-Yan process	255
9.2.1	Introduction	255
9.2.2	Cross section measurements	256
9.2.3	Prospects on the measurement of the forward-backward asymmetry	259
9.3	Determination of the W mass	260
9.3.1	Introduction	260
9.3.2	Event selections	260
9.3.3	$W \rightarrow e\nu$	261
9.3.4	$W \rightarrow \mu\nu$	263
9.3.5	Expected precision and systematic uncertainties	264
9.4	Multi-boson production	265
9.4.1	Introduction	265
9.4.2	Signal definition and modelling	266
9.4.3	Background processes	266
9.4.4	$W^\pm Z^0$ selection	267
9.4.5	$Z^0 Z^0$ selection	267
9.4.6	Systematic uncertainties	268
9.4.7	Results	268
10	Standard Model Higgs Bosons	271
10.1	Introduction	271
10.2	Higgs boson channels	275
10.2.1	Inclusive Higgs boson production with $H \rightarrow ZZ^{(*)} \rightarrow e^+e^-\mu^+\mu^-$	275
10.2.2	Inclusive Higgs boson production with $H \rightarrow WW^{(*)} \rightarrow 2\ell 2\nu$	285

10.2.3	The vector boson fusion production with $H \rightarrow \tau\tau \rightarrow \ell + \tau \text{ jet} + E_{\text{T}}^{\text{miss}}$	290
10.2.4	Searching for standard model Higgs via vector boson fusion in $H \rightarrow W^+W^- \rightarrow \ell^\pm\nu jj$ with m_{H} from 120 to 250 GeV/c ²	294
10.2.5	Vector boson fusion production with $H \rightarrow \gamma\gamma$	298
10.2.6	Associated WH production with $H \rightarrow WW^{(*)} \rightarrow 2\ell 2\nu$	304
10.2.7	Associated t \bar{t} H production with $H \rightarrow \gamma\gamma$	309
10.2.8	Associated WH, ZH production with $H \rightarrow \gamma\gamma$	318
10.3	Discovery reach	324
10.3.1	Accuracy of the Higgs boson mass measurement	324
10.3.2	Discovery reach for the Standard Model Higgs boson	325
10.3.3	Study of CP properties of the Higgs boson using angle correlation in the $\Phi \rightarrow ZZ \rightarrow e^+e^-\mu^+\mu^-$ process	327
11	MSSM Higgs Bosons	333
11.1	Introduction	333
11.2	Higgs boson channels	343
11.2.1	Associated $b\bar{b}H$ production with $H \rightarrow \tau\tau \rightarrow e^\pm\mu^\mp + E_{\text{T}}^{\text{miss}}$	343
11.2.2	Associated $b\bar{b}H$ production with $H \rightarrow \mu^+\mu^-$	346
11.2.3	Associated $b\bar{b}H$ production with $H \rightarrow b\bar{b}$	353
11.2.4	Charged Higgs boson of $M_{\text{H}} < m_{\text{t}}$ in $t\bar{t} \rightarrow H^\pm W^\mp b\bar{b}$ production with $H^\pm \rightarrow \tau^\pm\nu, \tau \rightarrow \nu + \text{hadrons}$ and $W^\mp \rightarrow \ell^\mp\nu$	357
11.2.5	Charged Higgs boson of $M_{\text{H}} > m_{\text{t}}$ in $gg \rightarrow tbH^\pm$ production with $H^\pm \rightarrow \tau^\pm\nu, \tau \rightarrow \text{hadrons } \nu$ and $W^\mp \rightarrow jj$	362
11.2.6	Charged Higgs boson of $M_{\text{H}} > m_{\text{t}}$ in $gg \rightarrow tbH^\pm$ production with $H^\pm \rightarrow tb$	369
11.2.7	Search for the $A \rightarrow Zh$ decay with $Z \rightarrow \ell^+\ell^-, h \rightarrow b\bar{b}$	373
11.2.8	Search for $A^0/H^0 \rightarrow \chi_2^0\chi_2^0 \rightarrow 4\ell + E_{\text{T}}^{\text{miss}}$ channel in mSUGRA	377
11.3	Discovery reach and measurement of MSSM parameters	379
11.3.1	Benchmark scenarios for MSSM Higgs boson searches	379
11.3.2	Discovery reach in the $M_{\text{A}} - \tan\beta$ plane	386
12	Search for Higgs Boson in Non-SUSY Models	389
12.1	Scalar sector of 5D Randall-Sundrum model	389
12.1.1	The $\phi \rightarrow hh$ analysis with the $\gamma\gamma b\bar{b}$ and $\tau\tau b\bar{b}$ final states.	389
12.2	Doubly charged Higgs boson pair production in the Littlest Higgs model	392
12.2.1	Search for the final state with four muons	394
12.2.2	Search for the final states with τ leptons	398
13	Supersymmetry	403
13.1	Introduction	403
13.2	Summary of supersymmetry	403
13.2.1	The MSSM	403
13.2.2	mSUGRA parameters and spectrum	404
13.3	Scope of present searches	405

13.3.1	Sparticle production and cascade decays	405
13.3.2	Test points for mSUGRA	407
13.4	Hemisphere algorithm for separation of decay chains	410
13.4.1	Basic idea and goal	410
13.4.2	Seeding methods	411
13.4.3	Association methods	412
13.4.4	Results	412
13.5	Inclusive analysis with missing transverse energy and jets	414
13.5.1	Analysis path and results	414
13.6	Inclusive muons with jets and missing transverse energy	416
13.6.1	Signal selection and backgrounds considered	416
13.6.2	Results for 10 fb^{-1} using full detector simulation and reconstruction	417
13.6.3	CMS Reach using inclusive muons with jets and missing energy	418
13.7	Inclusive analyses with same sign dimuons	419
13.7.1	Signal selection and backgrounds	419
13.7.2	Results for full detector simulated mSUGRA samples	420
13.7.3	CMS inclusive reach	420
13.8	Inclusive analyses with opposite sign dileptons	421
13.8.1	Signal selection and backgrounds	421
13.8.2	Results for point LM1	422
13.8.3	CMS inclusive reach	424
13.9	Inclusive analyses with ditaus	425
13.9.1	Event selection and background studies	426
13.9.2	Discovery potential of mSUGRA with ditaus final states	427
13.10	Inclusive analyses with Higgs	429
13.10.1	Signal selection and backgrounds	429
13.10.2	Results at LM5 and systematics	430
13.10.3	CMS reach for inclusive Higgs production	431
13.11	Inclusive SUSY search with Z^0	432
13.11.1	Topology of the signal	432
13.11.2	Event selection	432
13.11.3	Results and systematic uncertainties	433
13.11.4	CMS reach for inclusive Z^0 search	435
13.12	Inclusive analyses with top	435
13.12.1	Top quark and lepton reconstruction and identification	436
13.12.2	Signal selection and backgrounds	437
13.12.3	Results at point LM1	437
13.12.4	CMS reach for inclusive top search	439
13.13	Mass determination in final states with ditaus	439
13.13.1	Extraction of mSUGRA mass spectra from the measurement of the end points of invariant mass distributions.	439
13.14	Direct $\tilde{\chi}_2^0 \tilde{\chi}_1^\pm$ production in tri-leptons	442

13.14.1	Datasets	442
13.14.2	Backgrounds and trigger path	442
13.14.3	Analysis path	443
13.14.4	Results at LM9 and systematics	443
