

Note from Pedro Abreu, 30 Oct 2014

Dear Friends,

it might be too early to discuss these, but there are issues that would need addressing (sooner or later, but maybe sooner the better):

- timezones;
 - laboratory bases - now we have CERN and FERMILAB based Masterclasses. But we could have more bases
 - in other geographical timezones, KEK in particular (and/or IHEP) [Sesame?];
 - language specific - although the internationality is one of the big advantage of the programme, for some places the language barrier becomes a show stopper. So maybe someday we could dream to have
 - IMC in other language than english (pas de probleme avec l'anglais, mas parfois il nous faudra des autres langues pour être plus attractives chez les jeunes gens des autres pays, surtout les pays non-developpes avec la meme langue officielle - deja je pense au Portuguais, Espagnole, Français, Allemand);
 - lack of audio equipment meeting the very high standards (and cost) of IMC's, and solutions to cope with this;
- but of course we also need to terminate our meeting in a timely manner (at least before midnight CET).
- It is also a possibility that we have agenda for the next 5 meetings (without repetition)!

Cheers,
.pedro
